

DIRECT-TO-PRACTITIONER SERVICES AND SOLUTIONS

Ti DTP®—The Leading Edge in DTP Sampling

QPharma's Titanium® platform is a state-of-the-art SaaS enterprise solution designed specifically for the life sciences industry. It encompasses a suite of purpose-built solutions, including Ti DTP®, which caters to the direct-to-practitioner (DTP) needs in sample management.

With Ti DTP, you will benefit from a robust DTP order processing pipeline that incorporates various checks to ensure PDMA compliance and enforce your specific business rules. These checks include verifying the required PDMA fields, and monthly order limits, identifying duplicate orders, and detecting higher-than-usual volume requests. Any orders that violate these checks are flagged for review, allowing for appropriate action to be taken.

Ti DTP® integrates seamlessly with all major CRM/SFA platforms and provides home-office users with easy access to key business intelligence and information, including shipping and inventory dashboards, Acknowledgements of Content, and more.
